

WHAT IS A BUNDED OIL TANK?

Harlequin®
Storage Tanks

RELIABLE CONTAINERS

A **Single Skin Oil Tank** as the name suggests is a single mould tank. A **Bunded Oil Tank** is a 'tank within a tank'. If the inner oil tank splits, a bunded tank is designed to contain any loss of fuel preventing pollution to the surrounding environment.

However there are many more differences between single and bunded oil tanks, we've outlined these below...

2 year warranty

Single Skin Oil Tank

- Single moulded tank
- Cheaper to purchase
- No containment for oil spill
- No UV protection
- Can be illegal in some applications
- 2 year warranty

10 year warranty

Bunded Oil Tank

- Single moulded tank contained within another tank
- More reliable and can contain 110% of the inner tank contents
- Provides additional security
- Protects the inner tank against UV rays
- Minimises risk of tank rupture, overfill or other spill
- Longer life
- 10 year warranty
